

*Illustration 1: Cleaning brush in operation*

*Illustration 2: Direction of rotation cleaning brush*

### Description

By drilling, storing and handling the casings, dirt gets into the threaded rings and cone inserts. To make it easy to screw in the drill pipe screws when connecting the drill pipes, the thread and the cone must be clean. The cleaning brush is clamped with the 10mm shaft in a normal cordless screwdriver. The threaded rings and cone inserts are simply cleaned by rotating through with the brush. It should be ensured that the cordless screwdriver is only operated in the right-hand rotation to prevent the brush from twisting off.

### What are the specials of our new cleaning brush drill pipe screw:

- Easy and fast cleaning of thread and cone inserts
- faster screw connection of the drill pipes with cleaned threads
- Reduced wear on the thread of the drill pipe screws and the threaded inserts
- Large brush length for maximum cleaning length
- Round 10mm shaft for mounting on each cordless screwdriver
