

Picture 1: Concrete cover standard, one-way

### What are the specials of our new concrete cover:

- The flexible fins, which are slightly larger than the hole in the starter, still securely hold the cover in the opening, even in the case of already worn starters.
  - ➔ The time for the annoying wrapping of the covers with tape can therefore be eliminated (see picture 3).
- Very easy handling, due to the slightly conical shape of the cover (one-handed insertion up to the second lamella is possible and two more hammer hits are necessary for closing the hole)
- A generous collar prevents an incorrect installation or canting and at the same time the loss of the cover during drilling
- Easy removal of the cover by notches on the collar for screwdrivers (see picture 3, red circle).

Picture 2: Concrete cover standard, one-way, stamped

Picture 3: Concrete cover standard, one-way, new vs. old (with tape)
